CITGO® CITGEAR® WT320

Next Generation, Siemens/Flender®-Approved Wind Turbine Gear Lubricant

CITGO CITGEAR WT320, a Siemens/Flender-approved wind turbine gear lubricant, offers excellent gear & bearing protection through cutting-edge technology. This full-synthetic lubricant provides exceptional value to the fast growing wind turbine industry.

Features and Benefits

- Protects gear and bearing components against micro pitting and scuffing wear
- Meets OEM performance criteria for seal (Freudenberg static and dynamic seal tests) and coating compatibility (Mäder inner coating tests)
- Delivers extreme temperature performance
- Maintains excellent oxidation stability for extended fluid life
- Provides rust and corrosion protection in severe environments
- Quickly releases entrained air and suppresses foam
- Meets required industry standards: ISO DIN 51517-3, AGMA, and US Steel

Lower Torque Loss = Higher Efficiency

Note: See CITGO product information sheet for additional product and application information and always refer to your equipment owner's manual for proper lubrication selection.
